

environmentally sensitive

## SANISORB®

Enviro-LCS™ has developed Sanisorb® because of the serious environmental, health and safety issues caused by the use of dangerous chemicals in feminine hygiene units. Until Sanisorb®, the method to treat sanitary waste has been to soak the contents in a chemical liquid vapour which is unfriendly to the environment and to health.

Sanisorb®, however is a completely inert mineral. By eliminating moisture and drawing the air inside the unit through its unique molecular structure, all odour causing bacteria are eliminated. Further more, everything remaining is completely dry. The risk of spillage and contamination by chemicals is non-existent.

By choosing Enviro-LCS™, you are making a decision to protect your environment and Australia's.

**FURTHER INFORMATION:** For further information regarding any of our washroom products, contact Enviro-LCS™ on (02) 9310 1400, or visit our website at [www.enviro-lcs.com.au](http://www.enviro-lcs.com.au).
